Name_____

Due Date_____

Points Possible 10

This project will be completed outside of class hours – however, we can talk through ideas and work together on Friday.

You are going to look at temperature and wind speed in a few locations to calculate the wind chill. Choose three locations and report the following.

- City, State, Country
- Time
- Temperature
- Wind speed
- Calculated wind chill

Show your work and attach this page as a cover sheet.

(If you want to get all crazy in Excel, you are welcome to use the formula given on this chart to calculate wind chill directly. In that case, turn your spreadsheet in too.)

	Temperature (°F)																		
	Calm	40	35	30	25	20	15	10	5	0	-5	-10	-15	-20	-25	-30	-35	-40	-45
